

## Program no-9

```
public class Size
{
    public static void main(String[] args)
    {
        int number = 44;
        String size;
        switch (number)
        {
            case 29:
                size = "Small";
                break;
            case 42:
                size = "Medium";
                break;
            case 44:
                size = "Large";
                break;
            case 48:
                size = "Extra Large";
                break;
            default:
                size = "Unknown";
                break;
        }
        System.out.println("Size: " + size);
    }
}
```

Output:-

Size:Large
